

# Connection/wiring diagrams for RC Car

The image at left shows the version using the IR Receiver.

We also have a version using Bluetooth instead.

Instructions for building the original car are here:

<http://www.hitechnic.com/models>

Note that we modified the car to hold an STM32 Discovery Kit card that replaces the NXT Brick.

A video of their car is available on YouTube:

<https://www.youtube.com/watch?v=KltnZBSvLu4>

# The Battery

XTPower MP-10000 External Battery Pack with 10000mAh using dual USB 5V and DC 9V / 12V 2A

Ideal because it provides the 9V for the motors and sonar sensor, and 5V for the computer.  
(Can use 12V for the motors if desired.)

# Modify the F4 Disco target board

- You must disable the blue User button on the F4 Disco board so that the GPIO pin PA0 is available for use by the on-board app.
- To do so, remove (de-solder) solder bridge SB20 described in UM1472 Discovery kit for STM32F407/417 lines document
  - See Table 4 "Solder bridges"
  - See Figure 16 for circuit

## NXT Shield

Provides circuitry for the two motors and the sonar sensor

Kit, available for purchase from [http://shop.tkjelectronics.dk/product\\_info.php?products\\_id=29](http://shop.tkjelectronics.dk/product_info.php?products_id=29)

Power to NXT Shield

red and black  
wires

## Motor1

NXT2:PA15, Tach1  
NXT5:PB3, Tach2  
NXT7:PA10, Polarity1  
NXT9:PB6, PWM  
NXT11:PB1, Polarity2

white  
wires

## Motor2

NXT3:PA0, Tach1 (requires removal of solder bridge SB20)

NXT6:PA1, Tach2

NXT12:PA2, Polarity1

NXT10:PB4, PWM

NXT8:PA3, Polarity2

green  
wires

## HiTechnic IR Receiver

Vin: 5V

Gnd: Gnd

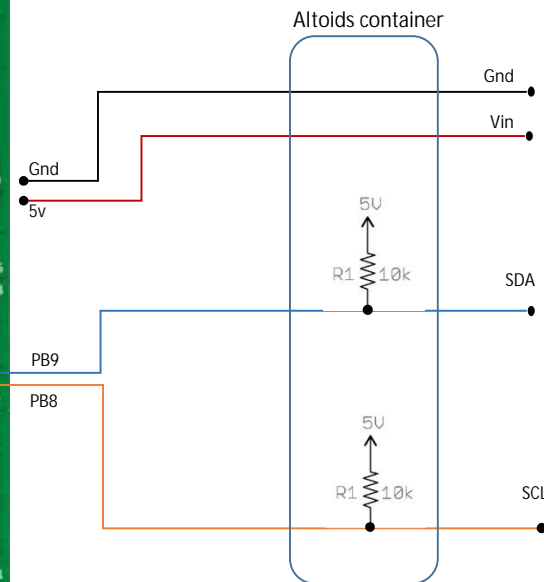

SDA: PB9

SCL: PB8

Using I2C #1

Wire colors are not as used

Resistors are in the Altoids can.

Power and ground lines go to the Altoids can, then from there to the sensor.  
The sensor lines go into the Altoids can.

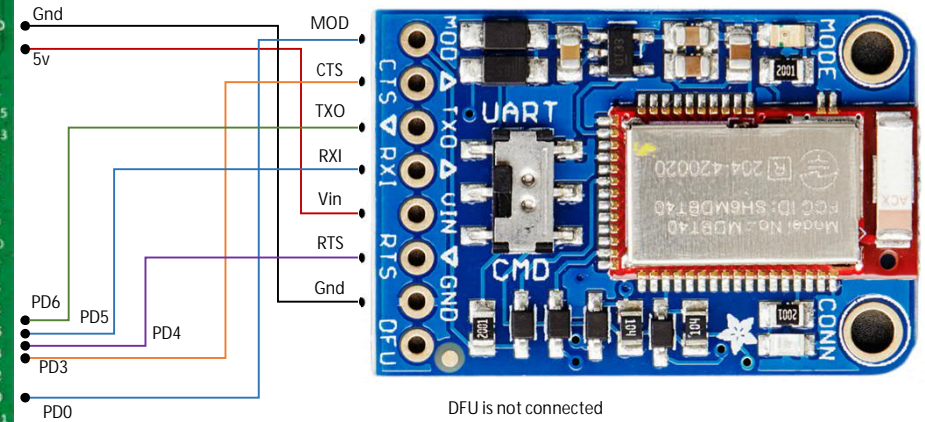

## Bluefruit LE Friend UART

Vin: 5V  
Gnd: Gnd  
MOD : PD0;  
CTS : PD3;  
RTS : PD4;  
Tx : PD5; -- RXI pin on breakout board  
Rx : PD6; -- TXO pin on breakout board

On USART #2

Wire colors are not as used

DFU is not connected

## Bluefruit LE Friend SPI

Vin: 5V  
Gnd: Gnd  
SDA: PB  
SCL: PB

Ultrasonic  
Sensor

This is for a 9-volt sensor,  
not an A/D sensor
